

HAUNCHING SLABS

Civilcast Haunching Slabs are designed to reduce the inlet size of a pit to accommodate a smaller grate or cover at ground level.

This is typically where a large pit is installed to suit large diameter pipes with the Haunching Slab reducing the inlet at the top of the pit.

Risers with a clear opening matching the reduced opening size are used to achieve the required depth.

ITEM #	ITEM DESCRIPTION
SL 1212 225 99	1600 x 1600 x 225m Precast Concrete Conversion Slab
SL 1515 225 99	1900 x 1900 x 225m Precast Concrete Conversion Slab
