

MULTI-PART COVERS

In situations where a large opening in the ground needs to be rendered safe and secure, a Multi-Part Cover from Civilcast provides an ideal solution.

The Multi-Part Cover is designed and assembled in compliance with Australian Standard 3996-2019. Made up of an arrangement of single Ductile Iron Covers and supported underneath by an engineered system of removable beams, each multi-part system is factory-built, disassembled then supplied in kit form along with detailed installation instructions to the work site.

Civilcast representatives are eager to take your enquiry and afford our in-house specialists the opportunity to satisfy any requirement for large covers in Load Classes B, D and G.
