

CIVILCAST®

Precast & Steel *Solutions* for Civil

TRASH BASKETS

An innovative solution to the environmental issue of collecting waste from stormwater.

Trash baskets are inserted into pits to collect waste contained in stormwater, preventing it from entering waterways. Trash baskets are ideal for use in a range industrial, commercial and civil applications.

Lightweight & Simple: Unlike others on the market, our trash baskets are lightweight and durable. They're so lightweight they only require one person to lift into place.

Durable Material: Our trash baskets are manufactured from UV stabilised polyethylene and fitted with stainless steel mesh screens.
